

Screen Recording for Respondus Monitor

How it works:

1. Screen recording requires both LockDown Browser and Respondus Monitor to be used for the exam. The instructor enables the Screen Recording option on a per exam basis from the LockDown Browser & Respondus Monitor Dashboard.

2. The screen recording video for an exam session initially appears below the webcam video in the proctoring results.

3. Click (or touch) the screen recording video to make it the primary, playback window. The rows of thumbnail images that appear below will switch to the screen recording view. Repeat this process to make the webcam video the primary focus again.
